

CARPET TO FLOOR

CARPET TO FLOOR PATH LIGHT (LF1900)

The LF1900 is a path light that provides illuminated delineation where carpeting meets bare floor. It is typically used around seating areas that have concrete flooring but are surrounded by carpeted pathways. These areas are often in the lower section of auditoriums.

Refer to the LF1900 specification sheet to select product options.

- To order the appropriate amount of LF1900:
1. Measure the linear footage of the areas where carpeting meets bare floor.
 2. Add 5% for waste from trimming and mitering

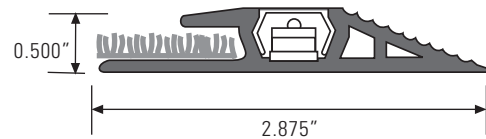

Provide the following information when ordering:

Product Code*	Total Footage
(Eg.) LF1900 C-R-12	400 ft.
	ft.

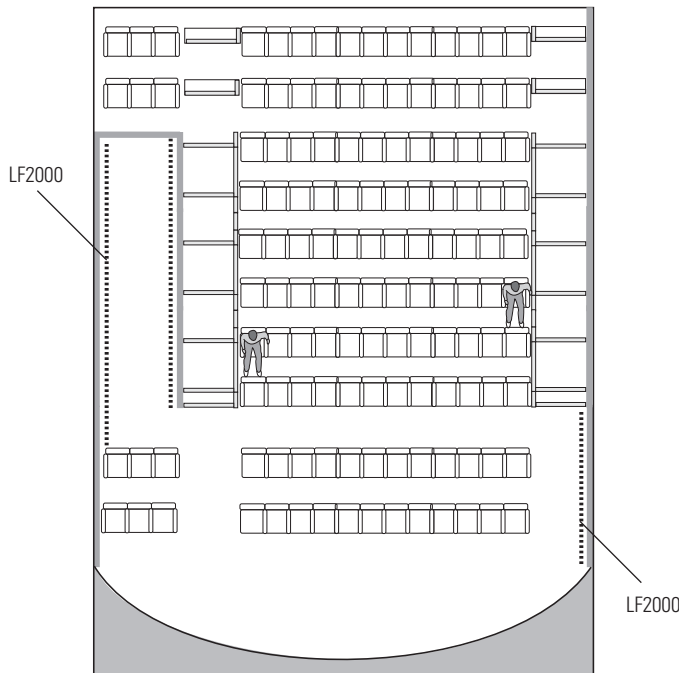

*Refer to LF1900 specification sheet for codes and details.

LF1900 is typically shipped in 10 foot sections and is field cut and mitered upon installation.

CARPET TO WALL

CARPET TO WALL PATH LIGHT (LF2000)

The LF2000 is a path light that provides illuminated delineation where carpeting meets wall. It is typically used along the walls of corridors leading to the auditorium exit. It is also used along the walls adjacent to ramped pathways often found in the lower section of auditoriums.

Refer to the LF2000 specification sheet to select product options.

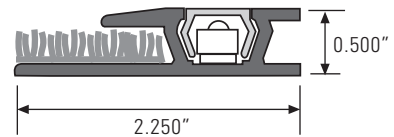

- To order the appropriate amount of LF2000:
1. Measure the linear footage of the areas where carpeting meets wall.
 2. Add 5% for waste from trimming and mitering

Provide the following information when ordering:

Product Code*	Total Footage
(Eg.) LF2000 C-R-12	400 ft.
	ft.

*Refer to LF2000 specification sheet for codes and details.

LF2000 is typically shipped in 10 foot sections and is field cut and mitered upon installation.
